INTRODUCTION

BCHPad is a decentralized launchpad built on Smart BitcoinCash which purpose is to help up-coming DeFi projects raise funds in a secured and convenient maner. We provide access to new ve-
rified projects, vetted investment opportunities and alo screened factors such as KYC.

BCHPad looks forward to setting an unused standard for blockchain venture financing admi-
nistation by reclassifying the agreement form between ventures and community supporters.

VISION:

Our vision is to become a reputable recognized blockchain service and community making a diffe-
rence to create succesful startups that drives a huge impact to the whole blockchain environ-
ment on a level playing ground.

WHY BCHPad

BCHPad apires to save investors from loss of funds in investments. As we al know, the market has become notorious for rug-pull scams, where the developers abandon a project and either run away with project funds or sell off their pre-mined holdings leaving the investors severly damaged.

HOW IT WORKS FOR IDO APPLIER

- A project fills out the form to be listed on BCHPad.
- We vet the project based on what they are trying to achieve and check that it is up to our standard.
- A vote is then carried out between token holders.
- We then initiate an audit from our 3rd party partner which then audits the contract.

NOTES

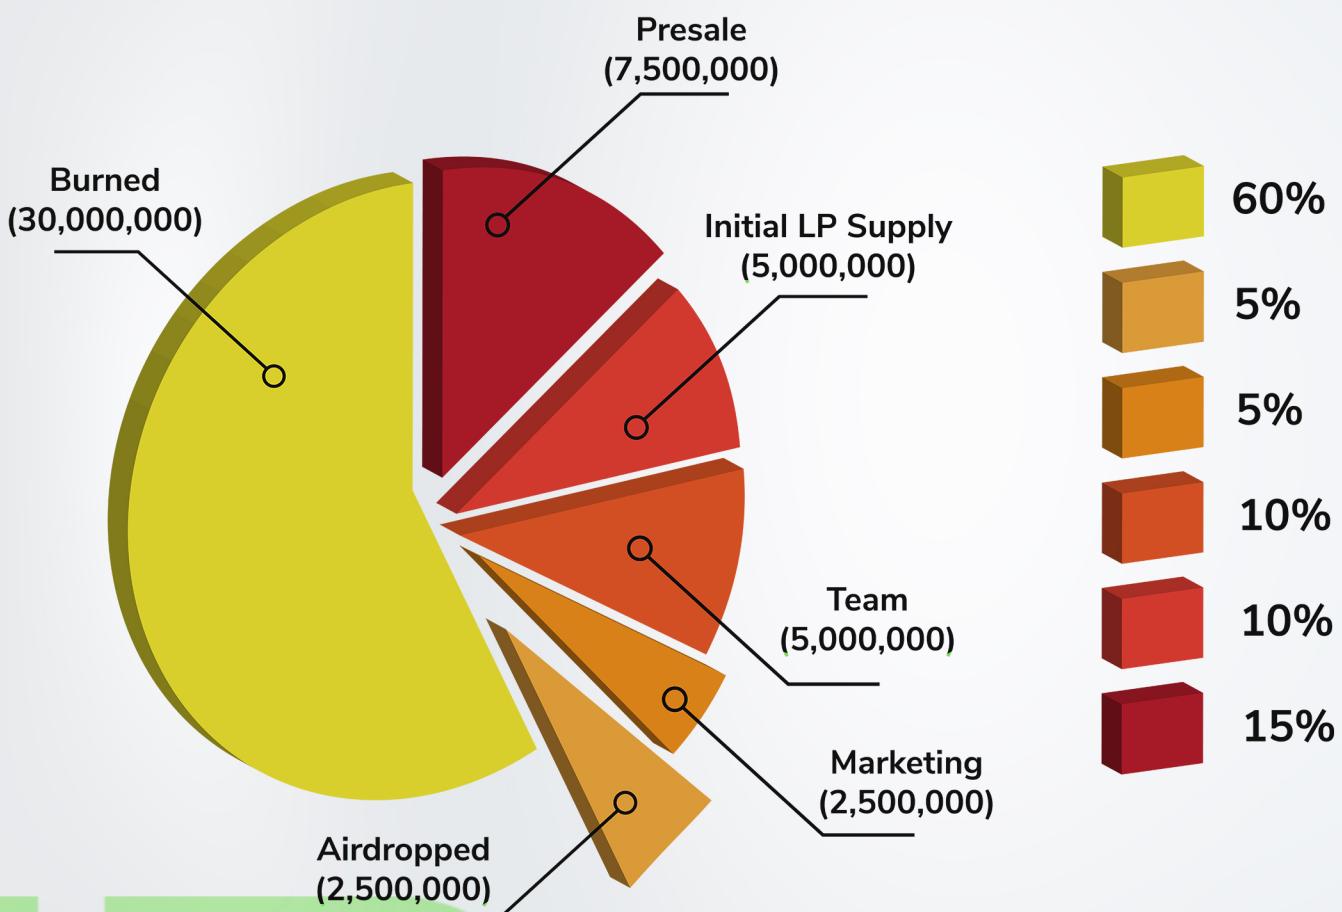

If the vote results ends at **NO**, the audit won't be carried out and the IDO won't be held.

If the vote final results is **YES**, the project owners then have to private doxx and then, the audit is carried out.

- The project then sets an IDO date.
- The BCHPad team then sets the requirement to participate.
- The project launches on BCHPad.
- If the softcap or hardcap isn't reached before the set end date, the contract expires and then investors are allowed to withdraw funds out of it and the other way around if the softcap or hardcap is met.

TOKENOMICS

Total Supply: 50,000,000
